

MO Sheung, Sean

Tung Chung | mo.sheung.sean@gmail.com | 6364 6919

Executive Summary

Motivated CUHK Learning Design & Technology student with strong programming foundations (Python, C++ , Java) and hands-on experience in robotics development, data analysis, and team operations. Through coursework such as *AI in Action* and *Intro to Multimedia Systems*, developed foundational understanding of machine learning, image recognition, and computer-vision system design. Experienced in collaborative technical projects and recognized globally for high-performance robotics. Proactive communicator and fast learner with strong initiative.

Education

Chinese University of Hong Kong, B.Sc. in Learning Design and Technology Sept 2023 – Present

- Expected Graduation: 2027
- GPA: 2.981/4.0
- **Relevant Coursework:** AI in Action, Intro to Multimedia Systems, Educational Technology, Programming, Data Analysis, Web Design

Machine Learning & Computer Vision Academic Experience

AI in Action – AI System Proposal for Reducing Bias in Figure Skating Judging

Utilized object detection algorithm similar to YOLO

- Designed a research-based proposal for an AI-assisted judging system aimed at reducing subjectivity in figure-skating technical scoring.
- Studied **VideoPose3D**, a state-of-the-art 3D human-pose-estimation model by Meta, to understand 2D-to-3D skeleton reconstruction and its applications in motion analysis.
- Proposed conceptual workflows including multi-camera data capture, skeleton generation, technical-specialist annotations, and bias-reduction mechanisms through anonymized 3D models.
- Conducted literature review on current scoring inconsistencies and explored how ML models could support consistent, objective TES (Technical Elements Score) evaluation.

Technical Projects

Leading Programmer, Vex Robotic Team – CUHK, HK Sept 2024 – Sept 2025

- Led programming and driving operations for CUHK's competitive robotics team, representing Hong Kong at the **2025 VEX Robotics World Championship** (ranked 17th of 249 teams globally).
- Engineered autonomous and driver-controlled behaviors using C++ , **PROS**, and **LemLib**, enhancing robot performance and reliability across tournament matches.
- Collaborated with teammates to debug hardware to software interactions and optimize robot movement algorithms.
- Created technical documentation and delivered team presentations, building communication skills for cross-functional collaboration.
- Applied iterative testing and rapid prototyping under competitive pressure.

Work Experience

Office Intern, Safe Concept, HK Jan 2024 – Apr 2024

- Analyzed product and sales data using Excel, improving reporting clarity and supporting data-driven decision-making.
- Conducted outreach to clients and healthcare professionals, presenting product features and resolving inquiries.
- Provided phone-based customer engagement and contributed to CRM updates, ensuring organized information flow.

Extracurricular Leadership

Orientation Camp Organizer, CUHK LDTEN, HK

May 2024 – Sept 2024

- Co-led the planning and execution of education faculty orientation camp, serving over 24 incoming students with a team of just four organizers.
- Managed budgeting, sponsorship outreach, and expense tracking as part of the Finance Team, maintaining transparency and cost-efficiency.
- Coordinated logistics, schedules, and contingency planning.

Competency

Programming: Python, C++ , C, Java, JavaScript

(Basic experience with pandas, NumPy, and ML-related Python workflows)

Technologies & Tools: PROS, LemLib, Git, Excel, .NET (basic), Microsoft SQL Server

Machine Learning Foundations:

- Understanding of CNNs, classification concepts, image-recognition fundamentals
- Basic exposure to computer-vision workflows (keypoints, pose estimation, frame analysis)
- Familiarity with model evaluation concepts (accuracy, pose metrics, bias considerations)
- Tools used in coursework: Python, Google Colab, matplotlib, pandas

Languages

Cantonese (Native); English, Putonghua (Fluent)
